

Route 124 Causeway CLOSED June 22 – August 28, 2026

The New Hampshire Department of Transportation (NHDOT) will begin roadway reconstruction on Route 124 in Troy on June 22, 2026.

The purpose of the project is to replace the three failing corrugated metal pipes that convey flow under Route 124 at Perkins Pond. A precast concrete box culvert will replace the metal pipes.

Work will consist of reconstructing approximately 1,271 feet of Route 124, constructing the box culvert, upgrading drainage infrastructure and replacing guardrail.

To accommodate construction activities, Route 124 will be closed to traffic. Following the detour period, the roadway will be reopened to one-lane alternating two-way traffic controlled by flaggers for the remainder of the project.

Message boards, traffic control devices, and detour signage will be used to notify the traveling public. Road users are also encouraged to sign up for free, real-time construction and traffic-related messages (text or email) from <https://newengland511.org/>.
